

DOUBLE-CATEGORICAL FRAMEWORKS FOR ALGEBRAIC K-THEORY

How does algebraic K-theory work?

Possible inputs:

1. ALGEBRAIC STRUCTURES

i.e. abelian/exact (think R-Mod)

Features:

- zero object
 - monos and epis
 - (co)kernels, short exact seq's.
- $$0 \rightarrow A \xhookrightarrow{i} B \rightarrow \text{coker } i \rightarrow 0$$
- $$0 \rightarrow \text{ker } p \hookrightarrow B \xrightarrow{p} C \rightarrow 0$$

What does K-theory do? it splits s.e.s.

$$K_0 \mathcal{C} = \mathbb{Z}[\text{obj } \mathcal{C}] / [B] = [A] + [C] \text{ for any}$$

$$0 \rightarrow A \hookrightarrow B \rightarrow C \rightarrow 0 \quad \text{exact} \iff \begin{array}{ccc} A & \hookrightarrow & B \\ \downarrow & & \downarrow \\ 0 & \hookrightarrow & C \end{array}$$

space?

\mathbb{Q} -constr.

$$\mathcal{C} \rightsquigarrow \mathbb{Q}\mathcal{C} \rightsquigarrow K\mathcal{C} = \mathbb{Z}[\text{NQ}\mathcal{C}]$$

obj = obj \mathcal{C}

maps $A \rightarrow B$

$$A \xleftarrow{c} \xrightarrow{c} B$$

compose:

$$\begin{array}{c} \swarrow \searrow \swarrow \searrow \\ \text{PB} \end{array}$$

⚠ HARD!

2. HOMOTOPICAL STR'S

i.e. Waldhausen cats

(think: model str w/ all obj cofib)
Chain comp's w/ quasi-isom

Features:

- zero obj
- cofibrations (\sim monos)
- cofiber seq's i.e. $\begin{array}{ccc} A & \hookrightarrow & B \\ \downarrow & & \downarrow \\ 0 & \rightarrow & B/A \end{array}$ (\sim s.e.s.)
- weak equivs

K-theory: split cofiber seq's + glue along w.e.

$$K_0 \mathcal{C} = \mathbb{Z}[\text{obj } \mathcal{C}] / [B] = [A] + [B/A]$$

and $[A] = [B]$, $A \xrightarrow{\sim} B$

S.-const.

$\mathbb{W}\mathbb{S}_3 \mathcal{C}$: cat w/

$$\text{obj: } 0 \hookrightarrow A_1 \hookrightarrow A_2 \hookrightarrow A_3 \quad \begin{array}{c} \downarrow \quad \downarrow \quad \downarrow \\ 0 \hookrightarrow A_{12} \hookrightarrow A_{13} \end{array}$$

$$K\mathcal{C} = \mathbb{Z}[\mathbb{W}\mathbb{S}_3 \mathcal{C}]$$

⚠

maps: nat br that are

pointwise w.e.

Thomason const.

$T_3 \mathcal{C}$ is the cat w/

$$\text{obj: } A_0 \hookrightarrow A_1 \hookrightarrow A_2 \hookrightarrow A_3 \quad \begin{array}{c} \downarrow \quad \downarrow \quad \downarrow \\ A_0 \hookrightarrow A_1 \hookrightarrow A_2 \hookrightarrow A_3 \end{array}$$

$$K\mathcal{C} = \mathbb{Z}[T_3 \mathcal{C}]$$

⚠

$$\text{maps: } A_0 \hookrightarrow A_1 \hookrightarrow A_2 \hookrightarrow A_3$$

OBS: if you squint, you start to see dbl cats!

3. CGW CATEGORIES [Campbell-Zakharevich] [S-Shapiro]

THE PURPOSE: axiomatize essential features of abelian cats needed for K-theory

Notably: not additive.

How do I turn an abelian cat into a dbl cat?

• obj = obj \mathcal{A}

• hor mor = \hookrightarrow monos

• ver mor = $(\downarrow \text{ epis})^{\text{op}}$

• separators = commutative

Defn A CGW cat is a double cat

denote: \mathcal{M} underlying hor cat

\mathcal{E} " ver cat

What properties need to be encoded?

• monos/epis

• all maps in \mathcal{M} , \mathcal{E} are univ

• zero obj $0 \downarrow$

$$0 \hookrightarrow \cdot$$

• \exists initial obj \emptyset for both \mathcal{M}, \mathcal{E} .

• (co)kernels

$$\begin{array}{c} \hookrightarrow \leftrightarrow \\ A \hookrightarrow B \rightarrow \text{coker} \end{array}$$

• There are functors

$$\text{coker: } \{ \xrightarrow{\text{obj}} \text{, } \xrightarrow{\text{mor}} \} \rightarrow \{ \xrightarrow{\text{+}} \text{, } \xrightarrow{\text{-}} \}$$

dual coker: ...

• Every $\hookrightarrow, \downarrow$ determines a unique s.e.s.

$$0 \rightarrow A \hookrightarrow B \rightarrow C \rightarrow 0 \rightarrow 0$$

bicartesian.

• Every hor mor $A \hookrightarrow B$ determines a ! dist. sq

$$\begin{array}{c} \emptyset \hookrightarrow \text{coker} \\ \uparrow \quad \downarrow \\ A \xrightarrow{i} B \end{array}$$

What's special about bicartesian sq?

hor $\xrightarrow{\cong}$ ver iff

$A \hookrightarrow B \rightarrow \text{coker}$

$f \downarrow BC \downarrow g \downarrow \cong$

$C \hookrightarrow D \rightarrow \text{coker}$

in this case, the square is "distinguished"

What can we do?

You can do both \mathbb{Q} constr and S.-constr

$$\begin{array}{c} \swarrow \searrow \swarrow \searrow \\ \text{Q} \end{array}$$

$$\begin{array}{c} \swarrow \searrow \swarrow \searrow \\ \mathbb{Q} \end{array}$$

• \exists initial obj \emptyset for both \mathcal{M}, \mathcal{E} .

• \exists zero obj $0 \downarrow$

$$0 \hookrightarrow \cdot$$

• \exists hor mor $A \hookrightarrow B$

$$A \hookrightarrow B$$

• \exists ver mor \downarrow

$$\downarrow$$

• \exists separators $A \xrightarrow{i} B$

$$A \xrightarrow{i} B$$

• \exists (co)kernels $A \hookrightarrow B$

$$A \hookrightarrow B$$

• \exists squares $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists dual squares $D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$

$$D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$$

• \exists commutative squares $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists dual commutative squares $D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$

$$D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$$

• \exists hor mor $A \hookrightarrow B$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists ver mor \downarrow such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists separators $A \xrightarrow{i} B$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists (co)kernels $A \hookrightarrow B$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists dual (co)kernels $D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$$

• \exists squares $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists dual squares $D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$$

• \exists commutative squares $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists dual commutative squares $D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$$

• \exists hor mor $A \hookrightarrow B$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists ver mor \downarrow such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists separators $A \xrightarrow{i} B$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists (co)kernels $A \hookrightarrow B$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists dual (co)kernels $D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$$

• \exists squares $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$

$$A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$$

• \exists dual squares $D \xrightarrow{k} C \xrightarrow{j} B \xrightarrow{i} A$ such that $A \xrightarrow{i} B \xrightarrow{j} C \xrightarrow{k} D$
